The Clinical Trials Cooperative Group Program, sponsored by the National Cancer Institute (NCI), is designed to promote and support clinical trials of new cancer treatments, cancer control and prevention strategies, quality-of-life issues during and after interventions, as well as cancer imaging trials that target therapy, surveillance, and biomarkers of therapeutic responses. An issue of this report will be distributed biannually in July (post AMI, AACR, ACRIN, ASCO and SNM) and in January (post ASCO Breast Symposium, ASH, ASTRO, ISOQOL, RSNA, SABCS, SGO and AMI/SMI joint meeting) to highlight the research presentations of the Cooperative Groups and the supporting activities of NCI investigators from the Division of Cancer Treatment and Diagnosis - Cancer Therapy Evaluation Program, Cancer Diagnosis Program, Cancer Imaging Program and Radiation Research Program, and from the Division of Cancer Prevention.

Research Highlights in this Issue:

ANBL0032: This phase 3 study evaluated the addition of the anti-GD2 monoclonal antibody ch14.18 plus cytokines (GM-CSF and IL2) to standard therapy of 13-cis-retinoic acid (RA) for children with high-risk neuroblastoma following intensive induction and consolidation therapy. The ANBL0032 study demonstrated that ch14.18 plus cytokines significantly improved event-free survival for high-risk neuroblastoma patients, thereby establishing a new standard of care for this patient population after completion of intensive conduction and consolidation therapy.

NSABP-C-08: This is the first phase 3 adjuvant trial evaluating an anti-angiogenesis agent in combination with standard chemotherapy for patients with early stage, resectable colon cancer (stage II and stage III). Although bevacizumab in combination with chemotherapy is considered a standard, first-line treatment for patients with metastatic colorectal cancer based on improvements in overall survival demonstrated in randomized, phase 3 trials in that clinical setting, bevacizumab did not improve 3-year disease-free survival in patients with early stage disease.

Disclaimer: References to abstracts included in this report are based on information provided to the EMMES Corporation (CTEP/NCI contractor) by the individual Cooperative Groups and may not reflect all abstracts accepted or presented at the indicated meetings. Inclusion of references under specific subheadings for Cooperative Group is based on information provided, associated trials and information in references. References will appear under only one disease heading chosen as the primary disease but will appear under as many Cooperative Group subheadings as is applicable. Abstracts that cannot be associated with DCTD (CTEP, CIP, RRP or CDP) or DCP sponsored clinical trials or for which required information was not made available are excluded. Abstracts from other relevant symposia in the same time period as the indicated meetings may also be included upon agreement and provided the required information is available. Links to online abstracts have been provided where they were available at the time of publication but there is no guarantee that these links will remain active.
